## Foreword

This translation has been made based on the original Japanese Industrial Standard established by the Minister of Economy, Trade and Industry through deliberations at the Japanese Industrial Standards Committee according to the proposal of establishing a Japanese Industrial Standard from Japan Construction Mechanization Association (JCMA)/Japanese Standards Association (JSA), with a draft of Industrial Standard based on the provision of Article 12 Clause 1 of the Industrial Standardization Law.

This Standard has been made based on **ISO 10263-3 : 1994** *Earth-moving machinery—Operator enclosure environment—Part 3 : Operator enclosure pressurization test method* for the purposes of making it easier to compare this Standard with International Standard; to prepare Japanese Industrial Standard conforming with International Standard; and to propose a draft of an International Standard which is based on Japanese Industrial Standard.

Attention is drawn to the possibility that some parts of this Standard may conflict with a patent right, application for a patent after opening to the public, utility model right or application for registration of utility model after opening to the public which have technical properties. The relevant Minister and the Japanese Industrial Standards Committee are not responsible for identifying the patent right, application for a patent after opening to the public, utility model right or application for registration of utility model after opening to the public which have the said technical properties.

**JIS A 8330** consists of the following 4 parts under the general title *Earth-moving machinery—Operator enclosure environment*:

*Part 1 : General and definitions*

*Part 2 : Air filter test*

*Part 3 : Operator enclosure pressurization test method*

*Part 4 : Operator enclosure ventilation, heating and/or air conditioning test method.*

Date of Establishment: 2004-01-20

Date of Public Notice in Official Gazette: 2004-01-20
